

Building *for the* Future

mobile command units

*We have
the* **Technology**

“We design the units as the tools agencies need to get the job done.”

Stay in touch...

...with headquarters or your community. State-of-the-art equipment is available on all our units including radio groundplane systems, surveillance cameras, complete telephone systems and satellites. We can even ready your vehicle for a hostage negotiation telephone system.

For flexible, long lasting, high-tech command centers, we've got your needs covered.

Shown at right is voice over internet protocol (VoIP) based radio control system that allows not only full inter-agency radio interoperability, but full dispatch control via wall mounted LCD touch screens (shown below).

“If you can

Envision *it...*

“We work hand-in-hand with our customers to build rugged, long-lasting units...

...from the chassis up.”

we can **Build** *it."*

Flexible Solutions

We work closely with our customers to develop a product that will meet their specific needs. We provide a variety of options such as the double "slide-out" feature as shown *on this page*.

Slide-outs are often used to add work station space; to comfortably accommodate more people during critical incidents; community education and outreach programs; as well as many other situations.

**"Our mobile
command
centers are
as flexible as
we are."**

Lasting Relationships

We recognize that every agency has different requirements with regard to vehicle use, size, outfitting and affordability. Therefore, USV constructs motorized vehicles, towable trailers and fifth-wheels, depending on our customers' needs and budgets. We use only the highest-quality products and materials and employ a team of expert craftspeople who build every component within each unit.

Our goal is to have the vehicles not only exceed our customers' initial expectations, but to ensure that they are satisfied for many years to come.

*Vehicles shown: Murrieta (top),
Chino and Orange County (second row),
Riverside and Lodi (bottom)*

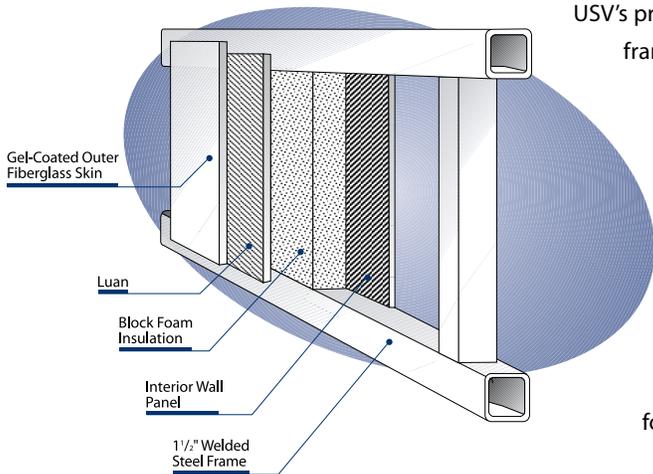

"The vehicle was designed to be versatile and used for community outreach programs as well as critical command situations."

*Steve Beckman, Lieutenant
Chino Police Department*

Vehicle Features

USV's products feature welded steel frames on gas- or diesel-powered chassis. High-gloss, imported fiberglass skin covers the vacuum-bonded, hard-wall body which is topped by a seamless, leak-proof rubber roof. Between the exterior walls and roof and vinyl interior wall paneling is sound-absorbing block-foam insulation.

Specifications and options

Technology changes at a rapid pace - we change right along with it. Please see our web site for the most up-to-date options and specifications.
